

FLOORING SYSTEM FOR BOWLING ALLEY

ABSTRACT OF THE DISCLOSURE

5

A prefabricated flooring system used in a section of a bowling lane such as an approach section. The flooring system includes a plurality of wooden boards having a longitudinal axis. The plurality of wooden boards each having substantially flat side edges along the longitudinal axis. Interior boards of the plurality of wooden boards are bonded together by an adhesive applied on the side edges and two of the outermost boards of the plurality of boards are bonded only on one side edge by the adhesive to adjacent corresponding interior boards to form a preformed approach section of wooden boards. In one aspect, the boards have a thickness of approximately that of the bowling lane. In another aspect, the preformed approach section has a width greater than that of the bowling lane.
